CSS Combinator Selectors

Combinator selectors are the different ways you can combine CSS selectors to target specific elements.

There are five different combinators in CSS:

@Div__Pradeep

02

1. Descendant Selector

It will select to all matching elements inside the parent element.

```
.container img{
    max-width: 100;

}
```

03

2. Adjacent Sibling Selector

The adjacent sibling selector is used to select an element that is directly after another specific element.

```
p + img{
    background-color: #333;

}
```

3. Child Selector

It will apply styles to only directchildren of the parent. Any elementsthat are nested further won’t be selected.

```
.nav > li{
    padding:1rem;

}
```

05

4. General Sibling Selector

The general sibling selector selects all elements that are next siblings of a specified element.

```
h1 ~ p {
    font-weight: bold;
}
```

06

5. Chained Class Selector

This is a chained class selector. It will select elements that have both class names.

```
.class1.class2 {
  color:red
}
```
