Deep web are web pages that search engines can't access, therefore hidden, accessed via passwords and authorisation.

Top layer - surface web, are web pages
that show up in **search engines** like
Google, Yahoo

Tap, Tap, Tap...

Deep web are web pages that search engines can't access, therefore hidden, accessed via passwords and authorisation.

The dark web refers to sites that are **not indexed** and only accessible via specialized web browsers

The dark web is a network of **untraceable online activity** & websites on the internet

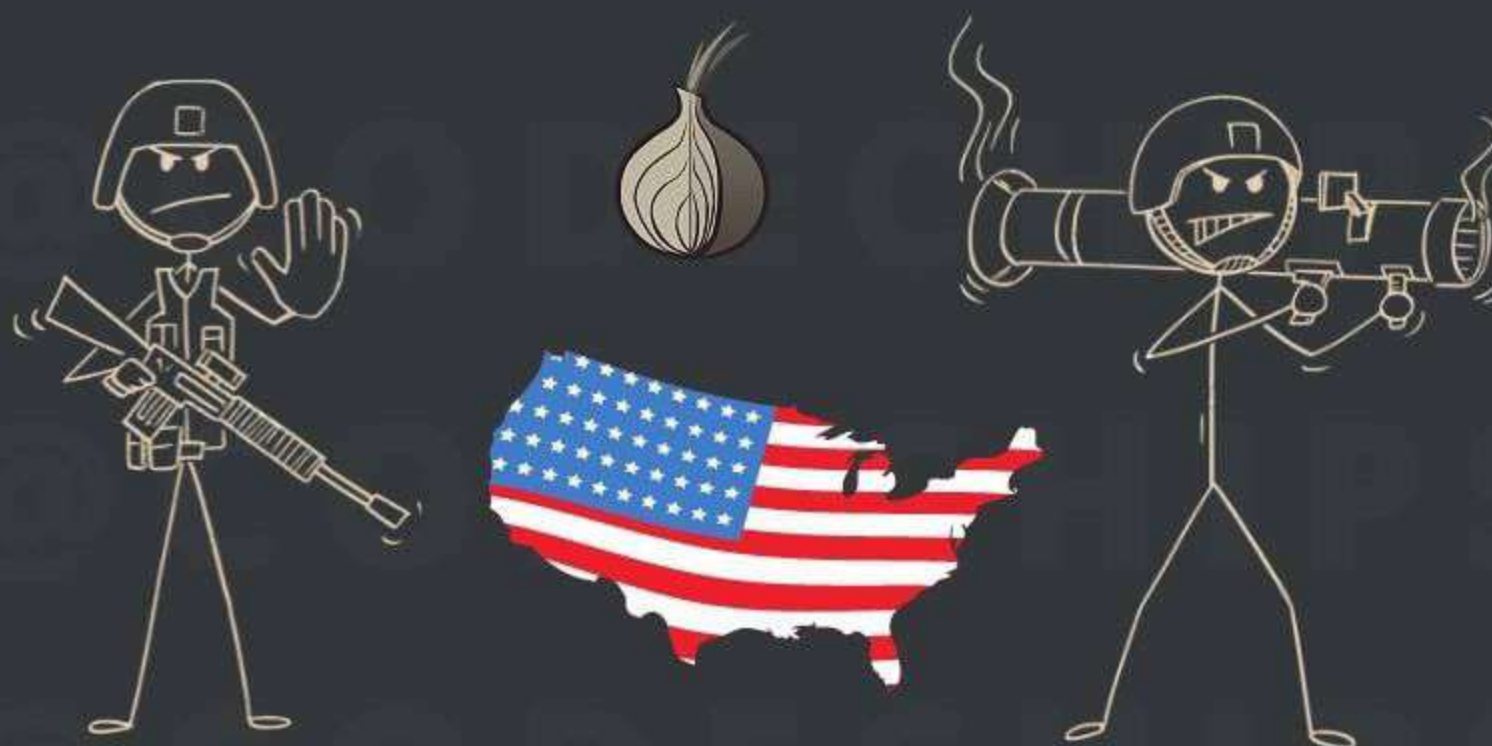

The reputation of the dark web has often been linked to **criminal intent, illegal content, purchase illicit goods or services**. However, legal parties have made use of this framework as well

Where did the dark web come from?

The dark web was actually created by the **US government** to allow spies to exchange information completely anonymously

US Military researchers developed **Tor** released it into the public domain for everyone to use to make it harder to distinguish their anonymity

Positive Uses:

Anonymity

Access
blocked sites

Tool for
whistleblowing

Books

Bad, Ugly Stuff:

illegal goods

financial
crime services

pornography
