

What are

# REST

API's in JS

# What's is API?

**APIs are an acronym for Application Programming Interface which means a set of functions and procedures allowing the creation of applications that access the feature**

## REST API?

**REST (Representational State Transfer) is a more data-driven architectural style that we use in building REST APIs. REST API use JSON for a data format, which is super browser-compatible**

# Following are some pros that come with it.

- REST APIs can be simple to build and scale as compared to other types of APIs.
- REST APIs facilitate client-server communication with simplicity.
- REST APIs use SSL security which means it can use HTTPS.
- REST calls can be cached.
- REST APIs are best for reliability and scalability.

# Methods in REST API
