

5 FREE APIs FOR YOUR PROJECTS

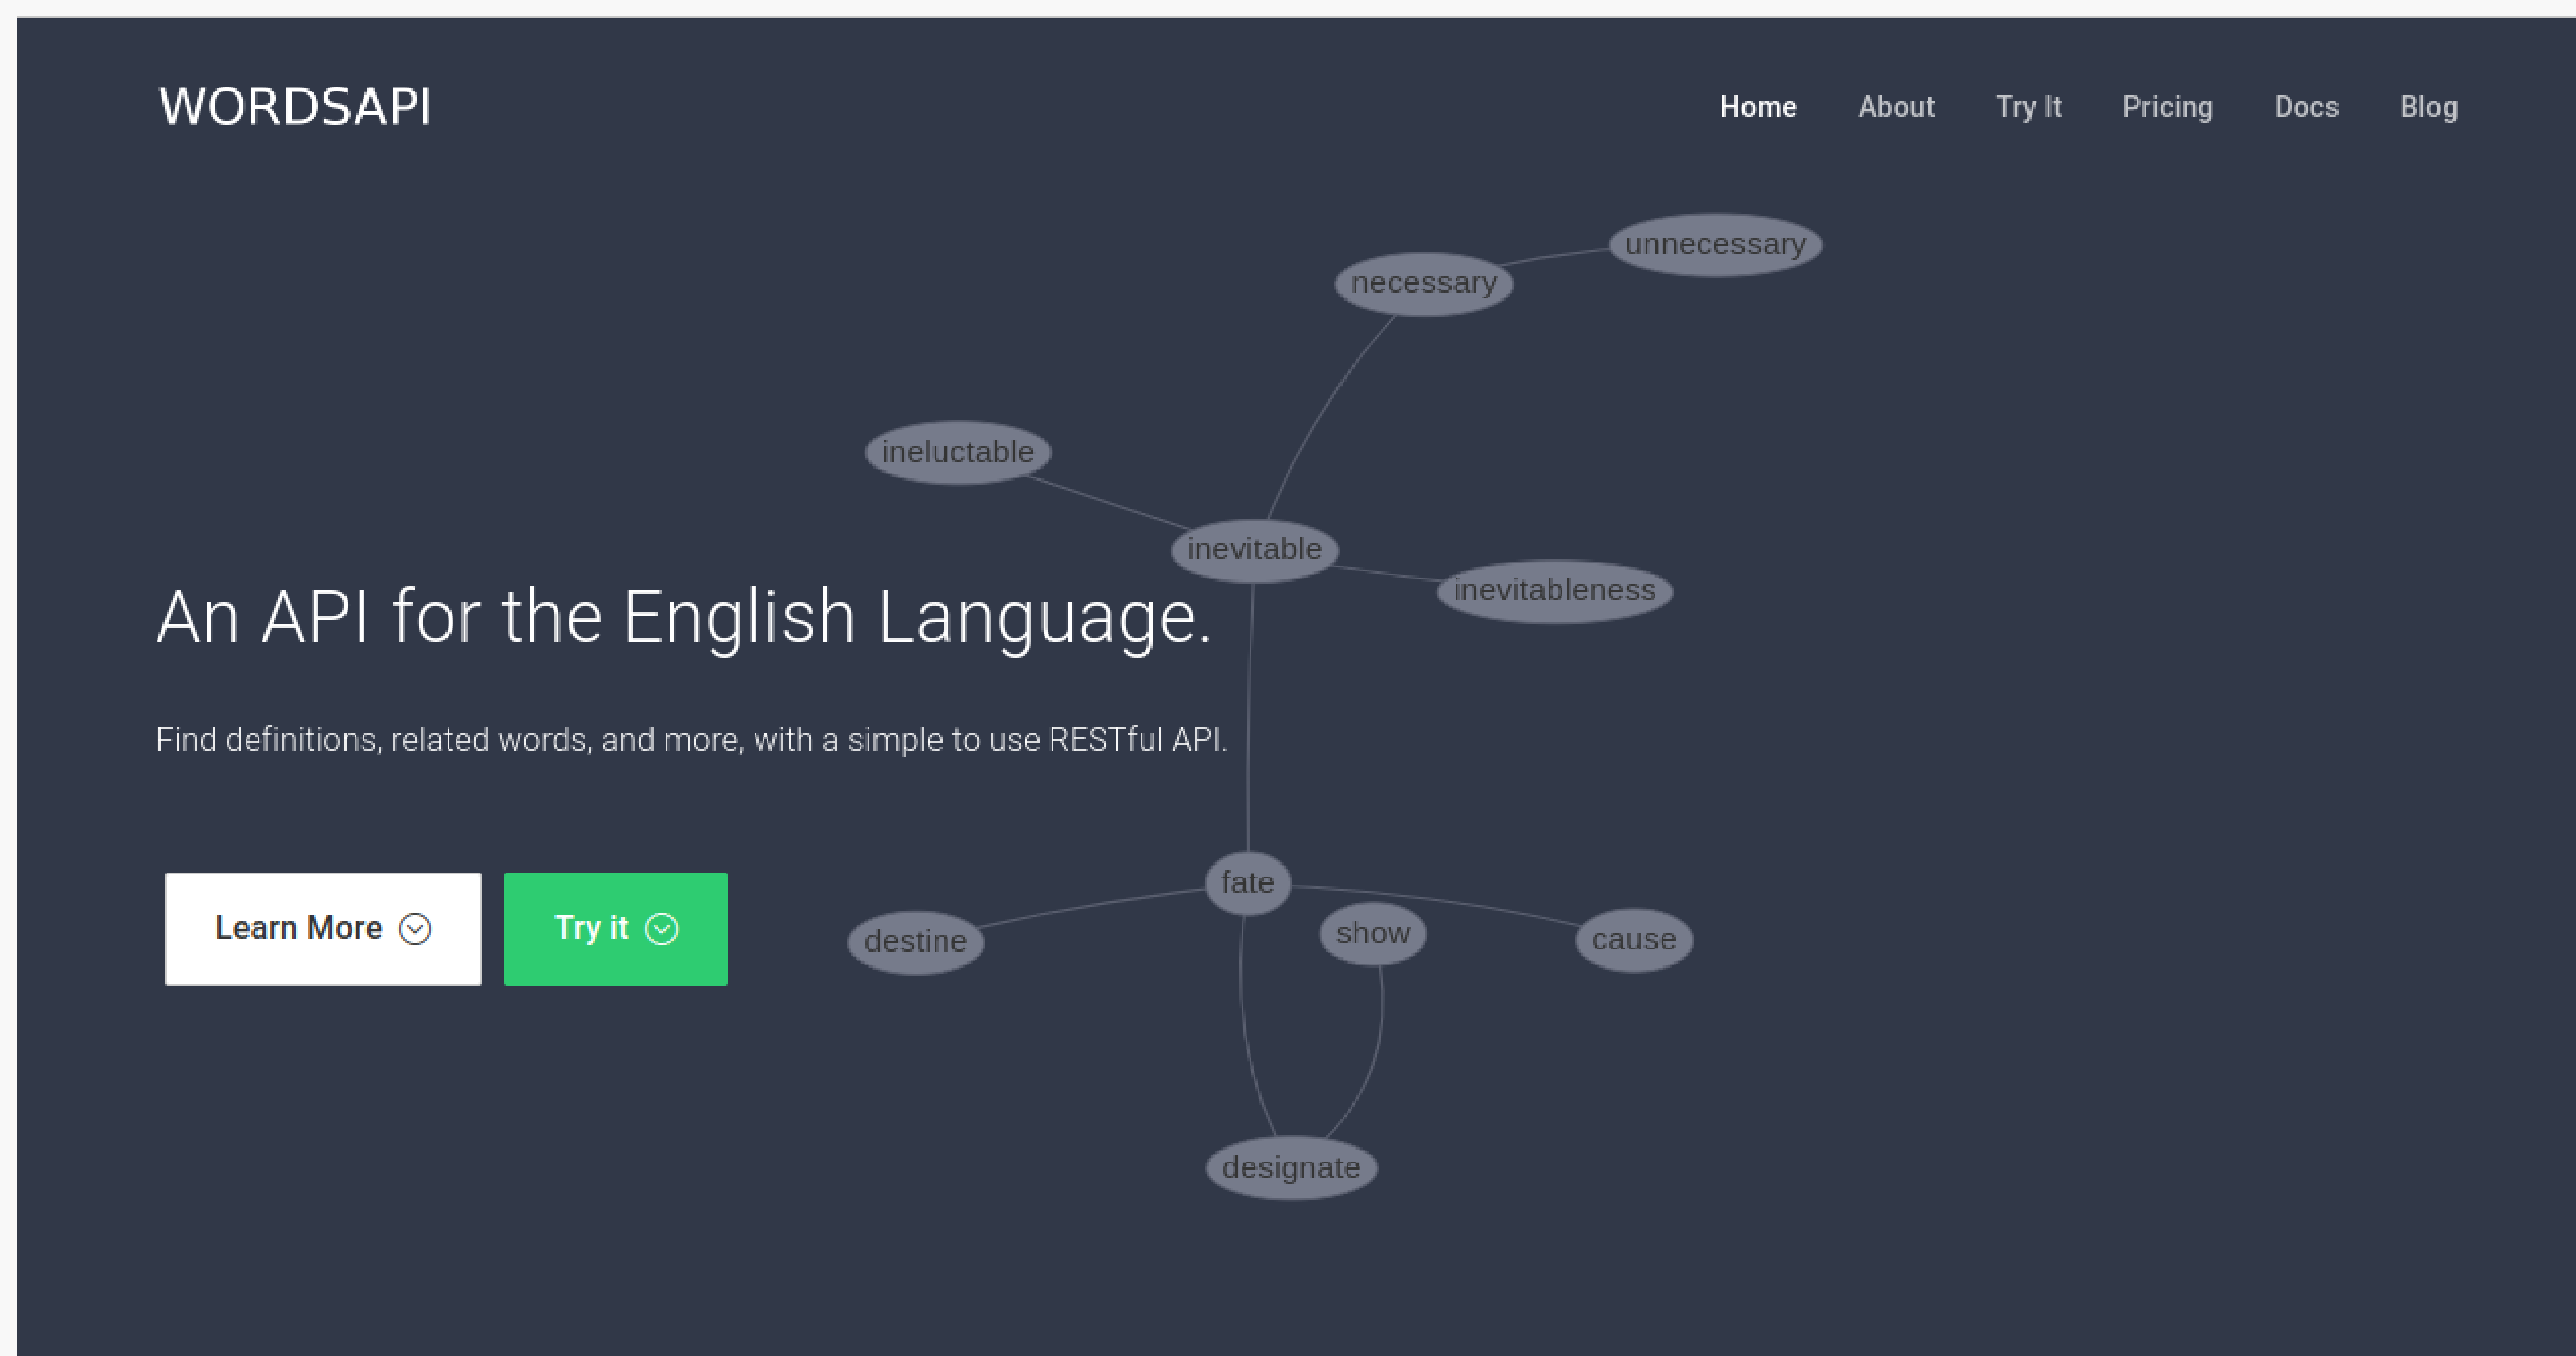

FAKE STORE API

If you are creating an e-commerce store then this API is for you. An e-commerce store is a great project to have and it just got easier with Fake Store API.

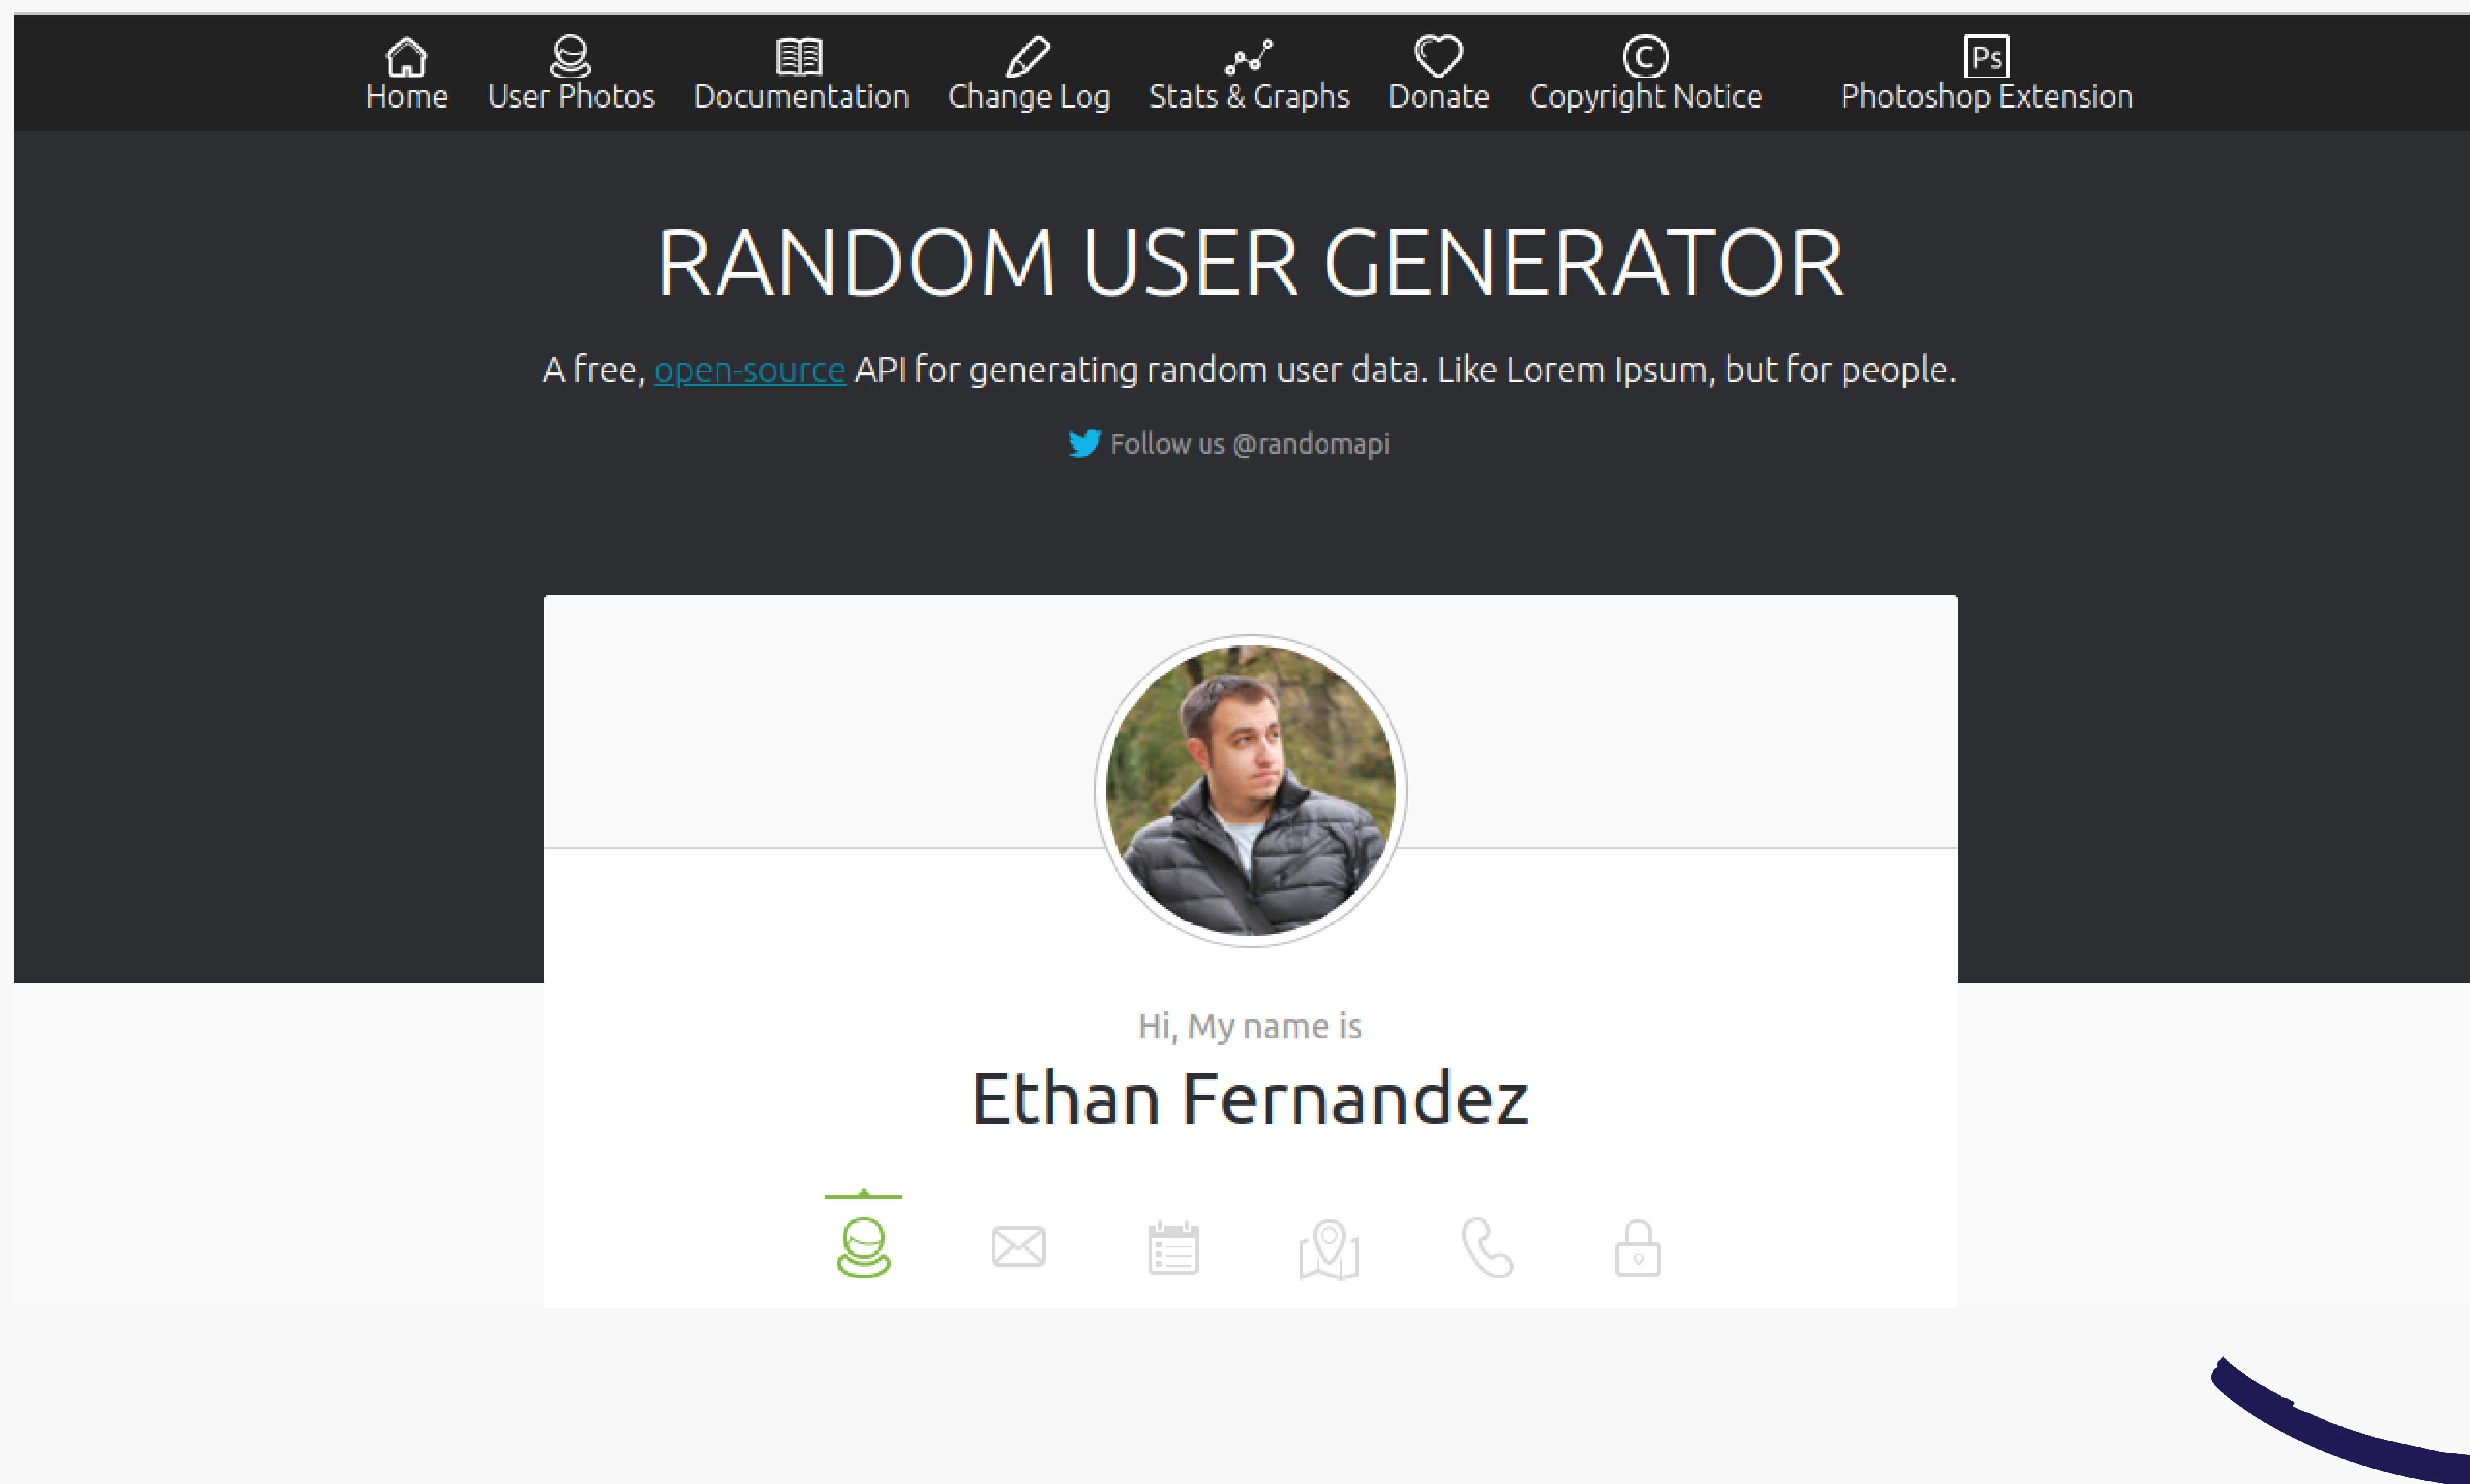

WORDS API

Words API is a set of Restful APIs that allow developers to look up word definitions, contextual details, and other morphological word-specific information, such as synonyms, example usage, part of speech, rhymes, region of use, etc.

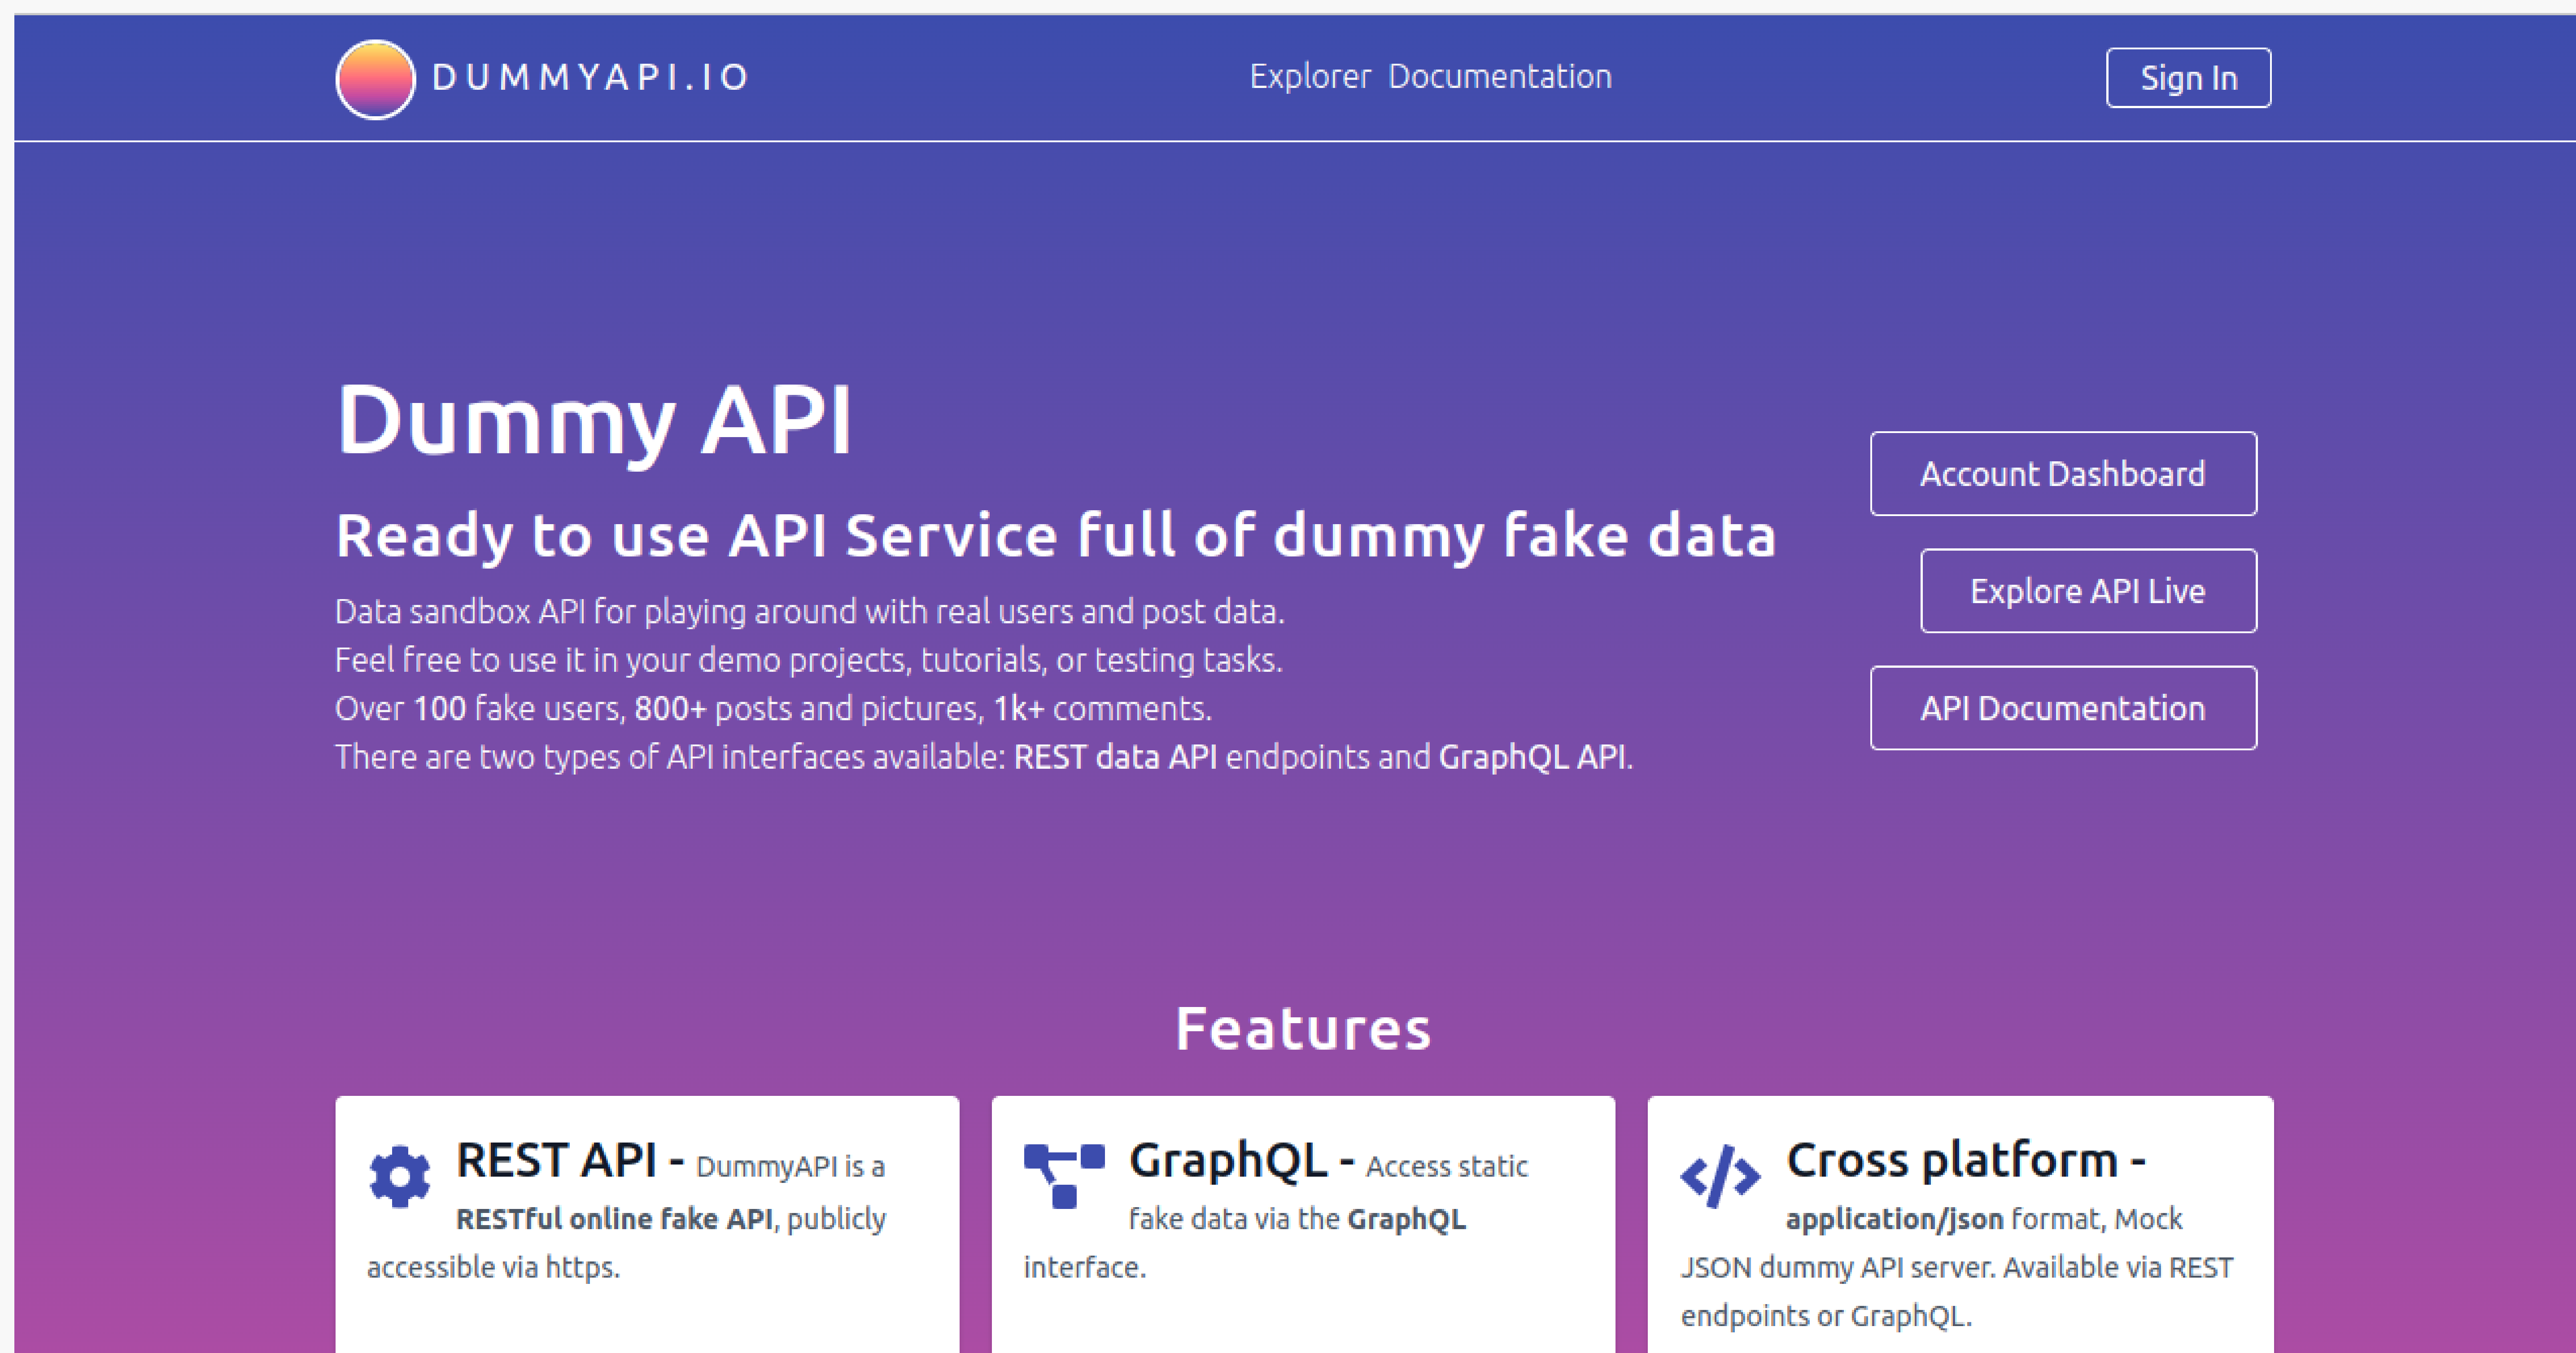

RANDOM USER DATA

Stop wasting time manually creating fake user data. Just pull through comprehensive random user data from this API. Very handy API for projects. And it simulates real practices much more than hardcoding data.

DUMMY API

Dummy API has everything you need to make your app look like it's bustling with real user activity. From fake users to fake comments and posts. Say goodbye to hard-coded JSON data.

The screenshot shows the DummyAPI.io website. The header is dark blue with the logo on the left, navigation links 'Explorer' and 'Documentation' in the center, and a 'Sign In' button on the right. The main content area has a purple-to-blue gradient background. It features a large heading 'Dummy API' followed by a subheading 'Ready to use API Service full of dummy fake data'. Below this is a paragraph describing the service as a data sandbox with over 100 fake users, 800+ posts, and 1k+ comments. To the right of this text are three buttons: 'Account Dashboard', 'Explore API Live', and 'API Documentation'. At the bottom, there is a 'Features' section with three white cards. The first card is for 'REST API', the second for 'GraphQL', and the third for 'Cross platform - application/json format, Mock JSON dummy API server'. A large blue arrow points from the bottom right of the screenshot towards the top right of the slide.

Dummy API

Ready to use API Service full of dummy fake data

Data sandbox API for playing around with real users and post data.
Feel free to use it in your demo projects, tutorials, or testing tasks.
Over 100 fake users, 800+ posts and pictures, 1k+ comments.
There are two types of API interfaces available: REST data API endpoints and GraphQL API.

Account Dashboard
Explore API Live
API Documentation

Features

- REST API** - DummyAPI is a RESTful online fake API, publicly accessible via https.
- GraphQL** - Access static fake data via the GraphQL interface.
- Cross platform - application/json format, Mock JSON dummy API server.** Available via REST endpoints or GraphQL.

SEJDA

Ever had to download a PDF just to read or edit it? Only to upload the changes again. Don't let your users endure this poor UX. With Sejda's API, you can read and edit PDFs straight from your web app.
