<https://webcode.tools/generators/css>

The screenshot shows the 'CSS Generator' page from webcode.tools. On the left, a dark sidebar lists various generator tools under 'GENERATORS': CSS, HTML, Structured Data, Meta Tags, Open Graph, and Twitter Card. The main content area has a light gray background. At the top, a breadcrumb navigation shows 'GENERATORS > CSS'. Below it, the title 'CSS Generator' is displayed in large, bold, black font. The page is organized into several sections: 'Animation' (with a 'Keyframe Animation' button), 'Background' (with 'Background Color' and 'Background Gradient' buttons), and 'Box' (with a series of small, unlabeled input fields). The overall design is clean and modern.

*The ultimate **CSS** tools for web designers*

#### **Gradient Generator**

Use multiple colors and opacity stops to get amazing gradients.

These gradients can be used as background images of banners, wallpapers, buttons or tables and in many other applications.

#### **Border Radius**

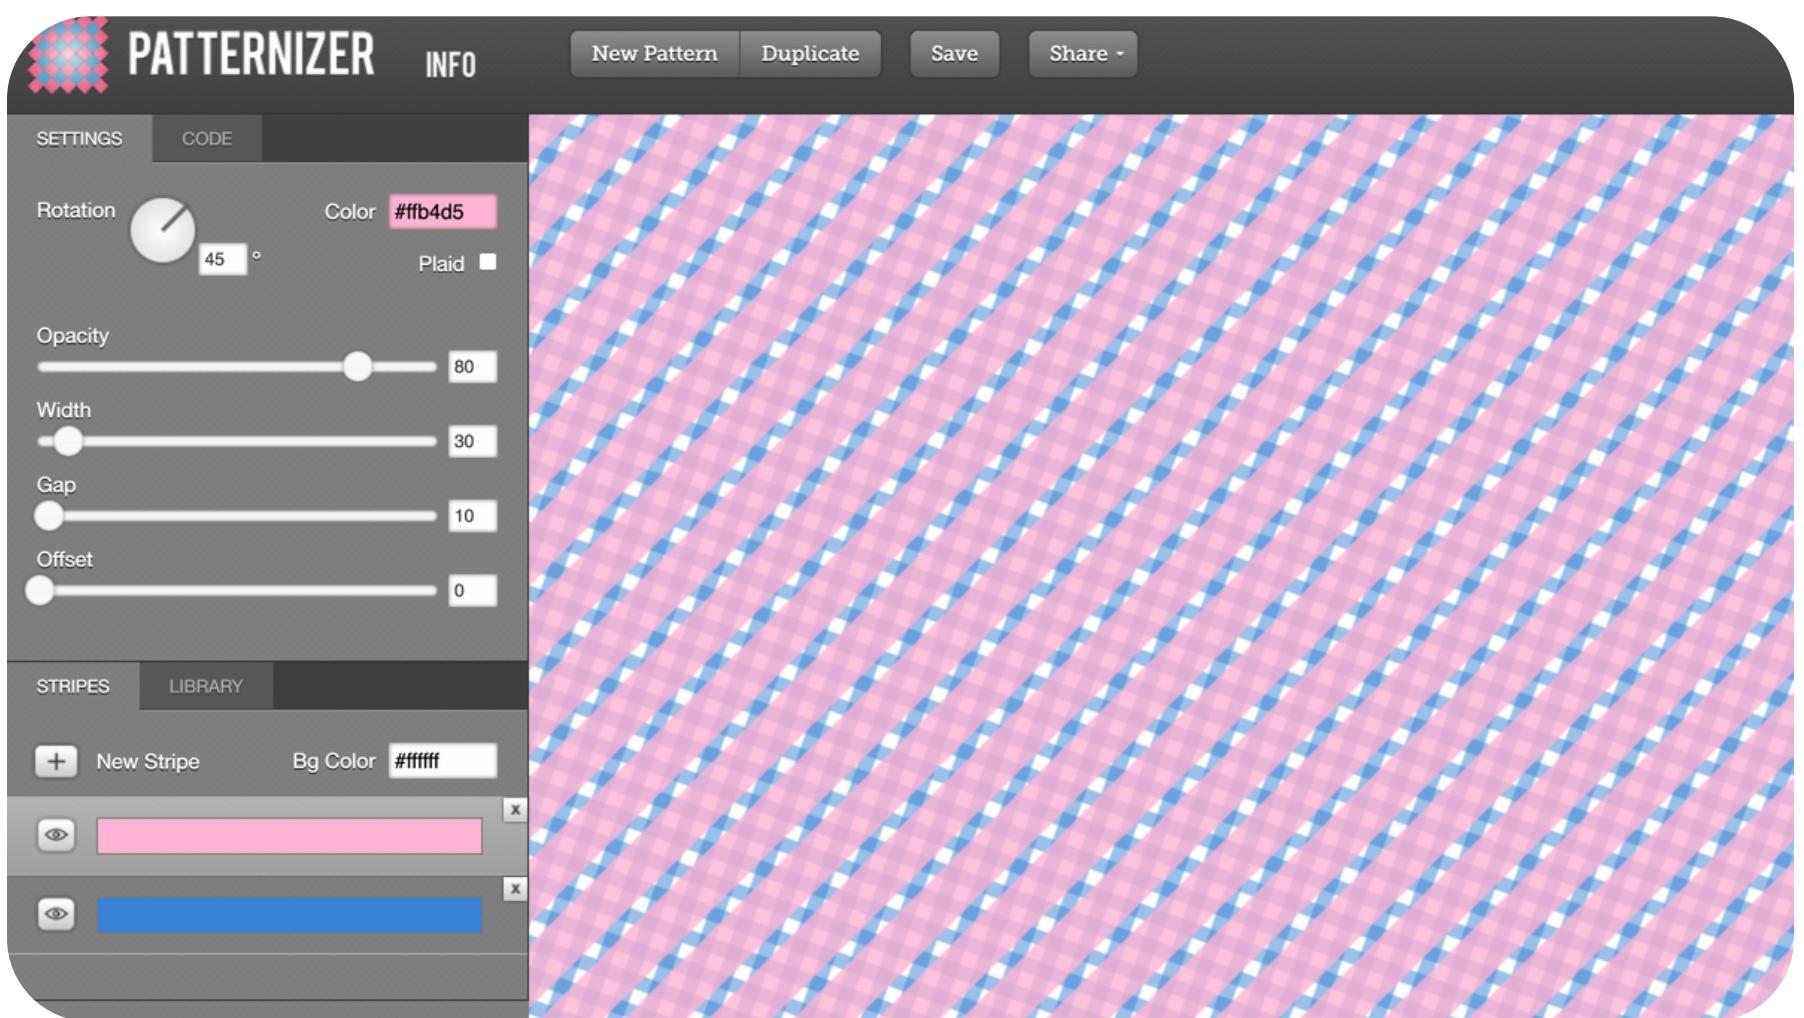

Super easy to use and a super time saver. Change all the borders selected at the same time.

<https://bennettfeely.com/flexplorer/>

The screenshot shows the Flexplorer tool interface. On the left, there's a sidebar with various CSS properties and their current values:

- flex: 1 0 auto
- item: (three gray boxes)
- order: (one gray box)
- align-self: auto
- # of flex items: 22 (+, - buttons)
- flex-direction: row
- flex-wrap: wrap
- justify-content: flex-start

On the right, there's a preview area showing a grid of colored boxes. The first row contains five pink boxes with the words "Lorem ipsum", "dolor", "sit", "amet", and "conse". The second row contains five orange boxes with the words "enim", "nunc", "volutpat eget", "aliquam", and "ne". The third row contains five green boxes with the words "maecenas", "nunc", "voldermere", "it", and "las".

## CSS Responsive Menu Generator

Visually generate a CSS responsive menu, this generator will help you design a CSS3 menu for your website, you can update any property and instantly see the changes that you have made. All of the CSS, HTML and Javascript code is generated for you and can be copy and pasted into your webpage.

**Updated:** This CSS Menu Generator has now been updated so that you can do the following:

- Responsive menu - code generated will now be responsive.
- Design your own menu - Click on Menu Design below and you'll be able to add or delete menu items from the menu.
- Rearrange the order of the menu.
- Added - select from different dropdown arrows for the submenus.
- Download Menu - click on the icon to download your menu. (May not work in all browsers)

### CSS & HTML Reference

- > CSS At-Rules 10
- > CSS Data Types 17
- > CSS Functions 45
- > CSS Properties 227
- > CSS Pseudo Classes 3
- > CSS Pseudo Elements
- > HTML Tags 110
