Shadow VS Drop-shadow

The two CSS shadow properties are :

1 box-shadow

2 drop-shadow filter property

Shadow VS Drop-shadow

Both these properties are similar in nature. Both of them help us create the shadow effect.

The difference comes when we work with transparent images.

Shadow VS Drop-shadow

We can use the `drop-shadow()` filter function to create a shadow on the image's content.

When we use the `box-shadow` property it creates a rectangular shadow behind an element's entire box.

CSS Shadows

Box-shadow VS Drop-shadow

```css
img {
  box-shadow: 5px 5px 10px black ;
}
```

OUTPUT ⟶

```css
img {
 filter : drop-shadow(5px 5px 10px black) ;
}
```
