Why do developers get paid so much

learn free, get paid high?

Ever wondered if almost everyone can **learn** **programming** for **free**, why is the **salary** relatively **very high**?

okay, let me give you the perfect analogy for it! 👇

consider the below image:

yes, i can build this

even if you have **not studied civil engineering** still you will be able to build it right?

almost anyone with **basic knowledge** & thinking can build this small little structure.

yeah that makes sense now

if almost everyone can run, why is **Usain Bolt** so highly paid?

Harshad
@codewithharshad

Now, consider this image:

are you kidding, Harshad?

now to build something like this, it takes a lot of **knowledge & experience.**

so even if you can learn programming all by yourself but being **excellent** at it is not so easy.
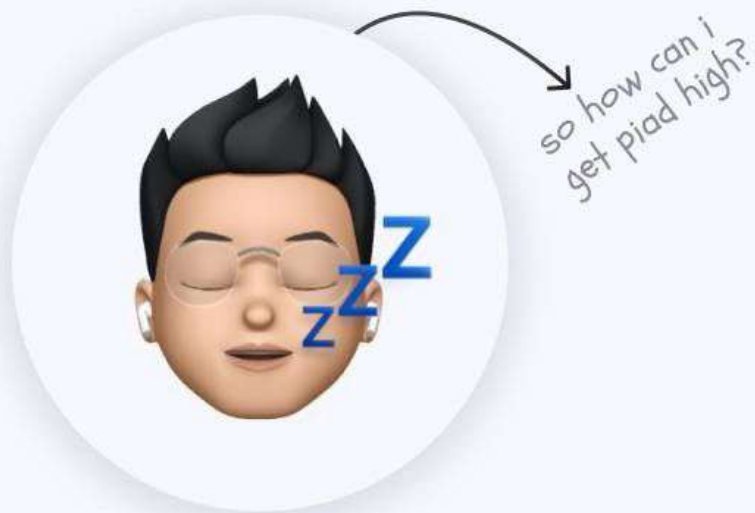

yeah
ikr

just as anyone can run, anyone can write a
basic program and run:

```
>> node helloworld.js
```

so how can i get piad high?

Listen! no one is going to pay high for the basic skills. You get paid according to the **value & experience** you bring to the companies that employ you.

i think you deserve a folllow.

good luck

okay, this post was not to demotivate you or make you quit from programming.

what I am trying to say is nothing comes easy. When you learn, do not focus on making money. Instead, have a passion, focus on building your skills 🔥

work harder and be unstoppable 🔥
